

Item P14-2128

Heavy Duty FR Mesh Debris Tarp

Colony Hardware's Fire Retardant Mesh Tarps are 1/16" knitted debris netting fabricated with reinforced hemmed edges and brass grommets. Mesh tarps can be used to create a building containment system during new construction, exterior & interior restoration, scaffolding usage, spray fireproofing, plastering, stucco and drywall installation. Made from 70% knitted mesh, our tarps are air permeable, yet is dense enough to provide containment of debris, dust and various other job-site materials. Include a folded and hemmed internal seam located along the middle of the tarp with additional grommets that provide an additional tie-off point and reduces flapping. Our tarps help to provide a safer job-site with reduced risk of injury from falling debris **not to be used as horizontal personnel netting**. Tear and rip resistant, simple to use and easy to install, our Colony tarps keep your job-site on time and on budget!
