

Item P23-0099

Kestrel Meter 2000 Wind Meter

Thanks to Kestrel's sensitive impeller technology, you get accurate wind speed information. It will capture air temperature or water temperature by simply dipping it in the water at an arms length for 30 seconds. It will NOT get water speed (CFS) in a river. The waterproof casing (it even floats) allow you to gauge the temperature of water and snow, as well as open air. A hard slide-on case, lanyard, and battery are included. The Kestrel 2000's backlight allows you to check the weather even in the darkness.
