

Item P15-7004

Levelline® Drywall Corner Trim

Levelline's tapered profile design eliminates installation headaches and callbacks. Installing off-angles, inside and outside corners is faster and easier with LEVELLINE's tapered flex design and new application box. Corner flex goes straight from the box or roll onto the wall, and requires less mud to apply and finish. Superior corner trim construction (tapered plastic core, joint tape and formulated surface paper) ensures drywall corners will not split or dent. LEVELLINE's can also withstand structural settling from green lumber and seismic movement without cracking or popping off the wall.
