

**Item P11-8291**

**Milwaukee 8" Metal Cutting Circular Saw**

Milwaukee 8" Metal Cutting Circular Saw delivers faster, cooler, cleaner, more affordable metal cutting. Features an 8" diameter blade yielding a 2 9/16" depth of cut that cuts through most corrugated metal roofing and decking sheets, structural, shape, grating and framing materials in one-pass. Insufficient cut depth means material must be flipped over and re-cut, usually a two-man operation. Durable magnesium blade shield deflects hot chips and sparks into a "chiptank" for easy clean up. Quick-Release blade shield latch for convenient chip disposal and blade changes. Powerful 15 amp motor turns at 3,700 rpm. The shoe of the saw is made of stainless steel and provides smooth and accurate cuts. Excellent for cutting materials such as structural steel, bar stock, stair & platform grating, strut, threaded rod, steel angle, stainless and aluminum. Arbor size: 5/8". **Includes 42-tooth carbide blade and blade wrench.**

Item	Description	Attributes
11-8291	6370-21 Metal Cutting Circular Saw- 8"	
10-3025	42-Tooth Carbide Blade (for material > 3/32" thick)	
10-3027	50-Tooth Carbide Blade Only (for material less than 3/32" thick)
