

Item P99-2195

Mini-Undercut+™

The Mini-Undercut+™ anchor is an internally threaded, self-undercutting anchor designed for performance in cracked and un-cracked concrete. Suitable base materials include post-tension concrete (PT slabs), hollow-core precast concrete, normal-weight concrete, sand-light concrete and concrete over steel deck. The Mini-Undercut+ anchor is installed into a pre-drilled hole with a power tool and a setting tool. The result is an anchor which can provide consistent behavior at shallow embedments as low as ¾ of an inch. After installation, a steel element is threaded into the anchor body.

Item	Description	Attributes
