

Item P14-2830

Nano-Lok™ Edge 8' Self Retracting Lifeline

Nano-Lok™ Edge Self Retracting Lifeline is specifically designed for foot level tie-off and sharp edge applications. This revolutionary product decreases fall clearance requirements while reducing potential trip hazards. Tough and flexible galvanized cable lifetime is 8' of 3/16" cable provides maximum range of motion, durability and cut resistance.

Nano-Lok™ Edge is specifically designed for foot level tie-off and retracts unused lifeline, virtually eliminating tripping potential. Other lanyards go slack, creating snag and trip hazard when tied off at foot level. Complies with ANSI Z359.14 by utilizing an innovative combination of lifeline material, energy absorption and harness connection to reduce forces on both the worker and edge. Traditional foot level tie-off products required fall clearance of up to 18.5'; the Nano-Lok™ edge required fall clearances as low as 16'. The Nano-Lok™ edge components work together to absorb the energy, limiting the average arresting forces to 900 lb or less. Maximum working loads: 310 lbs including worker and tools. **Available in single and 100% tie-offs options.**

Item	Description	Attributes
14-02830	Nano-Lok™ Edge 100% Tie-Off	Lanyard End Connector: Aluminum Rebar Lock Hook
14-2831	Nano-Lok™ Edge 100% Tie-Off	Lanyard End Connector: Steel Rebar Lock Hook
10-0257	Nano-Lok™ Edge Single Cable Unit	Lanyard End Connector: Steel Snap Hook
