

Item P15-1583

PowerPoint Pins

Standard powder actuated pins fasten inconsistently into steel. Frequently, steel is just too hard for conventional pins. Since the hardness of steel varies, steel is also inconsistent. Ramset's exclusive PowerPoint Pins solve this problem by providing easier penetration into hard steel and hard concrete. The benefit is reduced pin failures and increasing holding values. PowerPoint Pins work well in steel hardness up to 90Rb, making this an excellent, cost effective alternative to drilling and tapping. 100 pins per box. Shank diameter: .150.

Fits Ramset Models
