

Item P15-2054

Shrink Wrap Accessories

These accessories are specifically designed to be used with our Shrink Wrap Films. The Zipper is perfect for creating openings for material, personnel, or vehicles to pass through and still maintain the integrity of your enclosure. Strapping is used to support the Shrink Wrap before, during and after installation to minimize any "bellowing" that can occur, particularly in large openings. The Strap Tensioning Tool and Buckles are also needed to install the Strapping properly. Spray Adhesive is a fast and easy way of tacking two pieces of shrink film together to help during installation or for a quick repair.

Item	Description	Attributes
