

Item P26-0133
Structo-Lite® Basecoat Plaster

Structo-Lite® Basecoat plaster provides a plastic working material that conforms to various designs, helping achieve durability in walls and ceilings. It weighs half as much as sanded basecoat plaster and is perfect for locations where an aggregate is unavailable. The mill-mixed, perlite-aggregate gypsum plaster requires only the addition to water at the jobsite. It applies quickly and easily by hand or machine on gypsum or metal lath, clay tile, concrete, cinder blocks, and other approved plaster bases. The basecoat provides thermal conductivity. Its strong insulation properties provide a K faster of 1.74, three times the insulation value of sanded plaster.
