

**Item P23-0090**

**BW Technologies CO Detector Clip-On Monitor**

Single-gas detector for surveying levels of carbon monoxide (CO). Electrochemical cell sensor monitors ambient carbon monoxide levels continuously for up to two years without requiring unit calibration, recharging or battery replacement. Audio, visual, and vibration alarms alert simultaneously when carbon monoxide gas reaches factory set low or high levels. LDC screen shows self-test status, high and low alarm set points, maximum exposure, gas type, alarm level, detector life remaining, and time since last maximum exposure. Back-mounted alligator clip allows wearing the unit on a belt, and a concussion-resistant boot helps protect against damage
