

**Item P28-0456**

**Carbide Hole Cutter**

Cuts steel plate, stainless steel, sheet metal and tubing **up to 1/8" thick**. Has a 1/4" hex shank for use in quick-change adapters. Perfect for use in battery powered drills because they cut quickly with low power. An actual test using a 12 volt cordless drill and a 7/8" Carbide Hole Cutter took 5 seconds per hole and yielded 25 holes in 1/16" thick stainless steel on a single charge. The Carbide Hole Cutter stopped cutting after 150 holes! The design of the cutter allows for clean ejection of slugs and fast, clean cuts each and every time.
