KYORENE®

BACTERIOSTATIC

1

There are many solutions on the market for addressing anti-bacterial treatments as it relates to protective work gloves. However, most of them are achieved through chemical treatments and are not permanent.

2

Our Kyorene® Graphene Fibers have inherent anti-bacterial properties. Kyorene® Graphene oxide is polymerized inside the Nylon or Polyester fiber. Acting as a primary inhibitor for the growth of new bacteria and cannot be washed out.

3

Kyorene® Graphene Fibers makeup allows it to kill existing bacteria. As bacteria, fungi, mites, etc. adhere to the graphene composite fiber fabric, Graphene's sharp boundary penetrates the cell membrane, causing stress, eventually leading to bacterial death.

4

Effective management of bacteria on the hands helps the immune system remain stronger enabling it to better fight off other viruses and germs the body encounters.
