Item P13-1344

Festool Crown Stop Base Extension

Expanding the versatility of the Kapex sliding compound miter saw, the Crown Stop with Base Extension supports nested workpieces at any angle, and provides enhanced material support to the left or right of the saw. Integrated t-slots enable additional clamping capability, expanding the use of job-specific jigs when used with Festool FS clamps. Includes 1 base extension and 1 crown stop. Secures crown molding in the nested position for safer, more accurate cutting. Crown stops slide easily and lock securely with T-nut construction, allowing you to move quickly between setups.
