

Item P16-0992

Protec Rhino Tiles

Protec Rhino Tiles are designed for the temporary protection of exterior and interior finished flooring, decks, roofs, and other horizontal surfaces where protection is required. Rhino Tiles are the alternative to fine fluted rubber matting and 8' x 4' sheets of FR Plywood. Rhino tiles required less labor to install, quicker, easier and more efficient, with no mechanical fastening required in most applications. Easily trimmed with a jigsaw, offering one-man installation vs two men handling 4x8 sheets of plywood. Also Rhino tiles will not warp when wet, unlike plywood, and requires virtually no maintenance after installation. Made from 100% recycled PVC & can be re-used multiple times. Inherently Flame Retardant•UV Stable•Resistant to most solvents and chemicals.

Item	Description	Attributes
16-0992	1.6' x 1.6" Rhino Tile FR
