

Item P15-1648

Ramset Insulation Fastening System

The Ramset-I-F System is 4 times faster than the traditional stick pin installation method. No need to pre-measure fastener location, wait for adhesive to dry, or push washers on pins and trim length. Fasten the insulation directly to concrete, hollow block, exterior stud, and wood. The system can be used year-round: unlike stick pins you won't be restricted by cold temperatures or wet surfaces. Safer than gun-powder-driven fastening because less recoil, no spent powders casings, and no license required. Safer and faster than screw and washer fasteners. Delivers less torque to the installer's wrist and elbow. Works with insulation up to 6" thick. **Includes: (2) batteries, battery charger, carrying case and safety glasses.**
