

Item P23-0041
RIDGID SeeSnake® Mini Camera with TruSense®

SeeSnake® Mini Camera with TruSense® is a smaller version of the iconic RIDGID SeeSnake Standard system. 200' of 0.36" moderately stiff push cable diameter strikes a good balance between stiffness and the ability to navigate turns and ideal for inspecting 1.5" to 8" main laterals. With TruSense, advanced sensors on the self-leveling or fixed camera head convey valuable information about the in-pipe environment. TiltSense, the on-camera inclinometer provides the camera's degree of tilt and displays it on a SeeSnake CSx series Wi-Fi enabled monitor. High Dynamic Range (HDR) image sensor expands the camera's dynamic range, reducing blown-out areas and sections of the pipe that are too dark to see, offering superior clarity and detail.

Model #			67327
