

Item P15-2052

Shrink Wrap-Fire Retardant

Shrink Wrap is our newest product for building enclosures. This 8 mil thick material provides a fire retardant, water-proof, seamless enclosure able to withstand the most severe weather conditions. In addition, no other product on the market will retain heat as well as Shrink Wrap. Installs easily with the [Shrinkfast Heat Gun](#) (see Item **15-2045**) which shrinks the material by 25-30% creating a skin tight enclosure. The product also gives the jobsite a very neat and clean appearance, as compared to tarps and other products that can dislodge from the structure, and subsequently tear and/or flap with the wind. Meets NFPA 701 standard for flame retardance, as well as City of Boston Fire Marshall specifications for temporary enclosures.

Item	Description	Attributes
15-2052		Roll Size: 20' x 100'
15-2053		Roll Size: 30' x 100'
