

Item P16-0059

Wear Pads

Helps prevent sling cutting that can cause property damage, personal injury or death. Protects both the sling and the load from damage, and increases sling life. Can be easily repositioned along the body of the sling to accommodate various types of loads. The Wear Pad allows sling to adjust to lift without movement along load edge. Flat Quick Sleeve style is made of a high density, 5/16" synthetic felt (Pukka Pad). Velcro® allows for easy installation and removal. Friction keeps sleeve in place when rigging.
